The Avachinskaya bay is considered to be one of the most beautiful in the world. Its twisting coastline is cut by numerous small bays. Two spawning rivers flow into the bay. 32 species of fish inhabit its waters. Practically all the year round we can find here several species of sole, greenling, bullhead and halibut. Sea birds are rather numerous in the area. One can see seals in the bays situated at the entrance to the Avachinskaya bay. The seals are not afraid of people and let them approach rather close. Among big mammals one can find killer-whales. The waters of the Avachinskaya bay are rich in natural gifts – sea urchins and crabs.

The Starichkov Island is situated about 10 km (5,5 miles) from the entrance to the Avachinskaya bay. It got its name after small sea birds - Murrelets that nest there (in Russian it sounds like “Starik”). The Starichkov Island is a nature reserve on water which abounds in puffins, loons, cormorants and other waterfowl. Several nests of Steller’s Sea Eagle and a seal harem are situated on the island.
